DETAILED ACTION

Response to Arguments

1. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-8, 19-28, 34-65 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ding (5,980,972) in view of Berg et al. (5,464,650). Ding discloses all the limitations of the claims except for a present of modifying the ratio of the drug to the polymer. Berg et al. disclose that varying the ratio of drug to polymer controls the release rate of drug. Although, the combined teach of Ding in view of Berg et al. fails to disclose the modifying step being done while the coating is discharged out from the dispenser and without interrupting the application of the coating formulation onto the stent from a dispenser. The apparatus for dispensing the ingredients by spraying on an object as claimed is well known in the art and it is well known in the art that the ingredients may be mixed prior or at the time of application. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made

to use the apparatus as claimed to dispensing the coatings of Ding in view of Berg et al. on the stent. And it would have been obvious matter of design choice to provide the step of modify the ratio of the ingredients while the coating formulation is being discharged out from the coating dispenser since applicant has not disclose by having the ratio of ingredients is modified while the coating formulation is discharged out from the coating dispenser solve any stated problem or for any particular purpose and it appears that the coating would performed equally well on the stent as being premixed or as being mixed during application.
